HW#10

write a python program to counts the number of times a character is repeated in text

You must create a folder in a path specified from user , then inside this folder you must create two text files named as follow :

- **input text : this file must have a text entered by user**
- **search result : this file must have the following info : the character that user entered and the count of repeated in text**

   Note :

- **first step you must save the text in input text**
- **second step you must read text from input text file then write result in search result file**
