HW#7

Create a STRING module. Make this methods :

- **capitalizeEachWord(str)** : this method take one string and return a new string with capitalize the first letter in each word
- **isalnum(str) :** Returns true if string has at least 1 character and all characters are alphanumeric and false otherwise.
- **replace(old, new)** :Replaces all occurrences of old in string with new .
- **Reverse(str) :** return a reverse string , for example:
  if receive : "hello" , return : "olleh"
